Subject:-Computer

Class:-8th

UNIT-III

Lesson no:-11

Topic:-USING LIST AND CREATING A TABLE.

Answer the following Questions:-

Qno1:-Define the term Table. What are its uses?

Ans:-A Table is a collection of rows and columns. It arranges data in rows and columns format and provide an alternative way to organise information. The uses of table are:-

1) It presents information or data in a comprehensive manner.
2) It makes comparative analysis of data.

Qno2:-What is the significance of <TR> and <TD> tags in a table?

Ans:-In a table each row begins with the <TR> table row tag, and ends with the </TR> tag. Rows must be inside the <TABLE> tag. The column contains cells, each of which begins with the <TD> table data tag and ends with </TD>tag. <TD> tags must be defined within the <TR> tags. To specify column heading, we use the <TH> tag also ends with </TH> tag.

Qno3:-Differentiate between Cell padding and Cell spacing.

Ans:-

Cell padding:-	Cell spacing:-
1)This attributes sets the margins within a cell. 2) It creates a space between the edge of the cell (Cell wall) and the contents of the cell. 3)It is the pixel space inside the cells.	1)This attribute is used to specify the minimum distance between two adjacent cells. 2) Cell spacing is measured in number of Pixels between the table cells.

Qno4:-what is the difference between BORDERCOLOR and BGCOLOR attributes?

Ans:-

BORDERCOLOR:-	BGCOLOR:-
1)The BORDERCOLOR attribute is used to specify the colour of a table. 2)The default colour of the border is grey, but we can change it by assigning a different colour name or colour code to the BORDERCOLOR attribute.	1)The BGCOLOR attribute is used to set the background colour of a table. 2)The default colour of the background is grey, but we can change it by defining a colour name or hexadecimal code.

Qno5:- How will you create a Link on a web page?

Ans:-To create a hyperlink, <A> {Anchor} tag is used. The HREF attribute of the <A> tag stores the

reference {address} of the document that is to be linked. The text that appears on the hyperlink is enclosed between the starting tag <A> and ending tag </A>.

Syntax:-

<AHREF="DOCUMENT NAME">Hyperlink Text </A>.

Qno6:-Differentiate between Ordered and Unordered list.

Ans:- The differentiate between Ordered and Unordered list are:-

<UL> Unordered list:- An Unordered list indents each item in the list and adds a bullet against each item. This list is used when the items are not displayed in a particular sequence. The default bullet type for most web browsers is disc(small fixed black circle) before the list of items. The list begins and ends with <UL> and </UL> tags respectively.

<u><OL> Ordered list:-</u> The ordered list is used to display the list of items in a specific order. An ordered list indents and numbers each item on the list. By default numbers are displayed in a web browser when an ordered list is used. We can change the style using the Type attribute. To specify the item number for a given list item, Value attribute is used. Ordered list automatically starts with the number 1, but you can change the number that your list begins with and also start a list with a different number style.

<u>FILL IN THE BLANKS:-</u>

1) Tables are arranged in <u>rows</u> and <u>columns</u>.
2) <u>Table</u> tag is used to create a table.
3) <u>Width</u> attribute specifies the width of border of a table.
4) <u>Cell Padding</u> creates a distance between the edge of the cell and the contents of the cells.

5)<u>Hyperlink</u> is a highlighted text or image that stores the address of some other web page or a document.

6)Each row within a table begins with <u><TR></u> tag.

STATE TRUE OR FALSE:-

1)The align attribute is used to specify the alignment of a table <u>True</u>.

2)The default value for both cell padding and cell spacing is 4 <u>False</u>

3)The IMG SRC is an empty element <u>True</u>.

4)Ordered list automatically starts with the number 1 <u>True</u>

5)A Marquee displays a moving text message on the background <u>True</u>

6)<AHREF> tag is used to create a hyperlink <u>True.</u>

7)The default border colour of a table is red <u>False.</u>

MULTIPLE CHOICE QUESTIONS:-

1) Which tag is used to create an ordered list?

   Ans:-<OL>

2) Which attribute is used to set the border colour of a table?

   Ans:-Bordercolor

3) Which attribute is used to change the style of bullets in a list?

   Ans:-Type

4) Which tag is used to end an unordered list?

   Ans:- </OL>

5) Which attribute is used to set the background colour of a row?

   Ans:-<TR BGCOLOR>

6) What is the default bullet type for <UL> tag?

   Ans:- Disc
